

Wake Technical Community College Math, Sciences, and Engineering Division

Girls Raised in the Sciences

A summer camp to inspire young minds!
For girls age 12-14

July 16–19, 2018

Come be a part of Wake Tech's all girls STEM summer camp!!

Join us this summer and be a part of a movement to change the world! Well, the science, technology, engineering and math worlds at least!

STEM fields and jobs are typically full of guys, because **some girls think that STEM isn't for them**. This means that the ideas and experiences that help shape these types of jobs do not include a strong female influence and results in the loss of an important perspective. **What if you could change that?** What if your unique female perspective on real-life problems could create solutions never before imagined? **What if you could make a difference for global and societal concerns?** How great would that be?

That's what G.R.I.T.S is all about, letting young women explore **STEM** fields and imagine how they can use their talents to change the world. While at the camp, you might **build a roller coaster, investigate crime scenes, and learn about 3D printing**. You will also experience the creativity of **STEM** through various other activities. You will get to interact with women in **STEM** fields each day of the camp, and have the opportunity to work with other girls with like-minded goals through fun, hands-on activities.

Girls Raised in the Sciences

A summer camp to inspire young minds!

For girls age 12-14

A photograph of two students in a laboratory setting. They are both wearing safety goggles and white gloves. One student, wearing a red shirt, is holding a green pipette and dispensing liquid into a small yellow container held by the other student, who is wearing a white shirt. The background shows a typical lab environment with equipment and a blue wall.

Change the world this summer at our STEM summer camp!

Find out what you can do with a degree in Science, Technology, Engineering, and Mathematics (STEM)!

You might build a roller coaster, investigate crime scenes, and learn about 3D printing. - among other things!

STEM fields and jobs aren't just for men! They need strong female voices and perspectives. **Your unique contributions could create solutions to real-life problems** – even global concerns – never before imagined!
